

T 440

Knife cart

Transport safely

Cutter knives and knife head parts always at hand

Cutter knives

Cleaning

The transport of the cutter knives and all knife head parts from the workshop to the production area must be safe for the personnel and gentle for the knives.

Up to 16 cutter knives can be stored in the knife cart.

The cutting edges of the knives are protected against damage by a plastic bar. All parts and tools for setting up and clamping the knife system are clearly arranged on the knife cart.

■ Safety during cleaning

The knives are individually hanging and fixed in slots. This makes it impossible for the knives to slip off during cleaning. After cleaning, the knives can drain off completely in the cart. This prevents contact corrosion caused by cleaning agents.

■ Hygiene

The knife cart is made in stainless steel and meets the hygiene standards of food processing plants. The underneath is open so that residues from production and cleaning agents can drain off.

Technical specifications

■ Length	1205 mm
■ Width	680 mm
■ Height	945 mm
■ Weight	approx. 44 kg (approx. 50 kg with hydraulic pump for KNECHT clamping nut HSM)
■ Knife size	max. R 440

The machine meets the EC safety and health requirements and is provided with the CE-symbol.
